Business Planning Intern

RARE-X is reimagining the role of patient-powered data collection and sharing to drive research. We believe that there is an opportunity to radically impact how we work to support patients and the rare disease ecosystem to be more efficient, supportive and open. We are a group of committed individuals and organizations who:

- Imagine a world in which the only barrier to solving for rare diseases is the pace of science
- Imagine an organization that applies health technology and data sciences coupled with patient driven data, to one of the biggest and most solvable challenges in rare disease therapeutic development: data access
- Imagine a team that thinks creatively, works collaboratively with and for patient communities, and operates with accountability to establish a shared and trusted environment for rare disease data access

RARE-X is an emerging organization with a mission to propel research towards therapies for rare diseases. You can help us to increase the pace of science, and drive improvements in data gathering and analysis.

Job Description

RARE-X is looking for a Business Planning Intern to support market sizing, pricing model development and other business planning and strategy needs.

Initial Projects

- Landscape rare disease conditions to prioritize expansion of RARE-X platform, including sizing, identification of drug development pipelines, and known genetic etiology
- Develop pricing model for sponsored programs with industry partners
- Develop business KPIs for executive team
- Perform gap analysis of business process and workflow for development of RARE-X data collection program

Time Commitment 10-20 hours per week
